

Ideation Phase

Brainstorm&Idea Prioritization Template

Date	11 th October 2022
Team ID	PNT2022TMID49983
Project Name	Project – Natural Disaster Intensity Analysis and Classification Using Artificial Intelligence

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Brainstorm & Idea Prioritization for “Natural Disaster Intensity Analysis and Classification Using Artificial Intelligence”:

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

- 🕒 10 minutes to prepare
- 🕒 1 hour to collaborate
- 👥 2-8 people recommended

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

🕒 10 minutes

Team gathering

Define who should participate in the session and send an invite. Share relevant information or pre-work ahead.

Set the goal

Think about the problem you'll be focusing on solving in the brainstorming session.

Learn how to use the facilitation tools

Use the Facilitation Superpowers to run a happy and productive session.

[Open article](#) →

Define your problem statement

To classify the natural disaster based on the live image given as input by using Deep Learning.

🕒 5 minutes

PROBLEM

How might we tackle the problem of classifying the natural disaster?

Key rules of brainstorming

To run a smooth and productive session

Stay in topic.

Encourage wild ideas.

Defer judgment.

Listen to others.

Go for volume.

If possible, be visual.

Step-2: Brainstorm, Idea Listing and Grouping

2

Brainstorm

Ideas related to the classification of natural disaster

10 minutes

TIP
You can select a sticky note and hit the pencil (switch to sketch) icon to start drawing!

JEYASHREE

Natural disasters affect the ecosystem.

Many lives have been affected due to the natural disaster.

Necessary for the earlier classification.

This will reduce the loss of life.

To reduce the effects, a webpage is designed.

It classifies the natural disaster based on the image.

Live image data are taken for classification.

Done by using Deep Learning Techniques like CNN.

Large images are needed for better accuracy.

LAKSHMI PRIYA

To Classify the natural disasters

naturally occurring events that cause problems to environment

Cyclone Intensity Calculation

Disasters like earthquake, flood, wildfire are classified using this model.

Work with open CV

Deep Learning techniques have been applied

Live Images can be captured using webcam and then tested

Classifies based on image

Reduce the loss of life

KAVIPRIYA

A natural disaster can cause loss of life and property.

It can help monitor people's behavior and events in real time.

AI to detect and classify the type of disaster with high accuracy rate.

Natural disasters can also be prevented or reduced by effective management.

Huge amount of dataset is needed for training.

In particular, it is a disaster in increasing frequency rate in disaster risk reduction.

The transmission of information, internet and the development of natural maps to the disaster.

Disasters can be prevented by using AI to detect and classify the type of disaster with high accuracy rate.

AI can predict the type of natural disasters, including earthquakes.

KAVIYAVARSHINI

detect and classify the type of disaster with high accuracy rate

developed using deep learning techniques like multilayered deep convolutional neural network

A model to predict cyclones, earthquakes, wildfires, flood has been prepared

To carry out disaster analysis, twitter were used where people share their views

using two deep convolutional CNN to compare three different image techniques, linear support vector classification, linear discriminant analysis and softmax.

With the help of neural network, it is possible to predict floods and save masses from disaster

CNN based simple feature extractor with a softmax layer

CNN model is used to extract flood images from raw images and color filters are used to refine the desired detection

The proposed system's efficiency and accuracy were tested on several datasets and outperformed other methods to give the highest results.

3

Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. In the last 10 minutes, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

20 minutes

Technical Aspects

A large dataset is needed for the accurate model.

Create a user-friendly GUI that helps classify the natural disaster.

Social Impacts

Reduce the loss of life

Earlier precaution measures

Availability of resources

Image data needed for classification

Enormous data is needed for classifying the image data.

People emotions

People emotions on drastic situations

People emotions on their behavior before and after their lives.

TIP
Add customizable tags to sticky notes to make it easier to find, browse, organize, and categorize important ideas as themes within your mind.

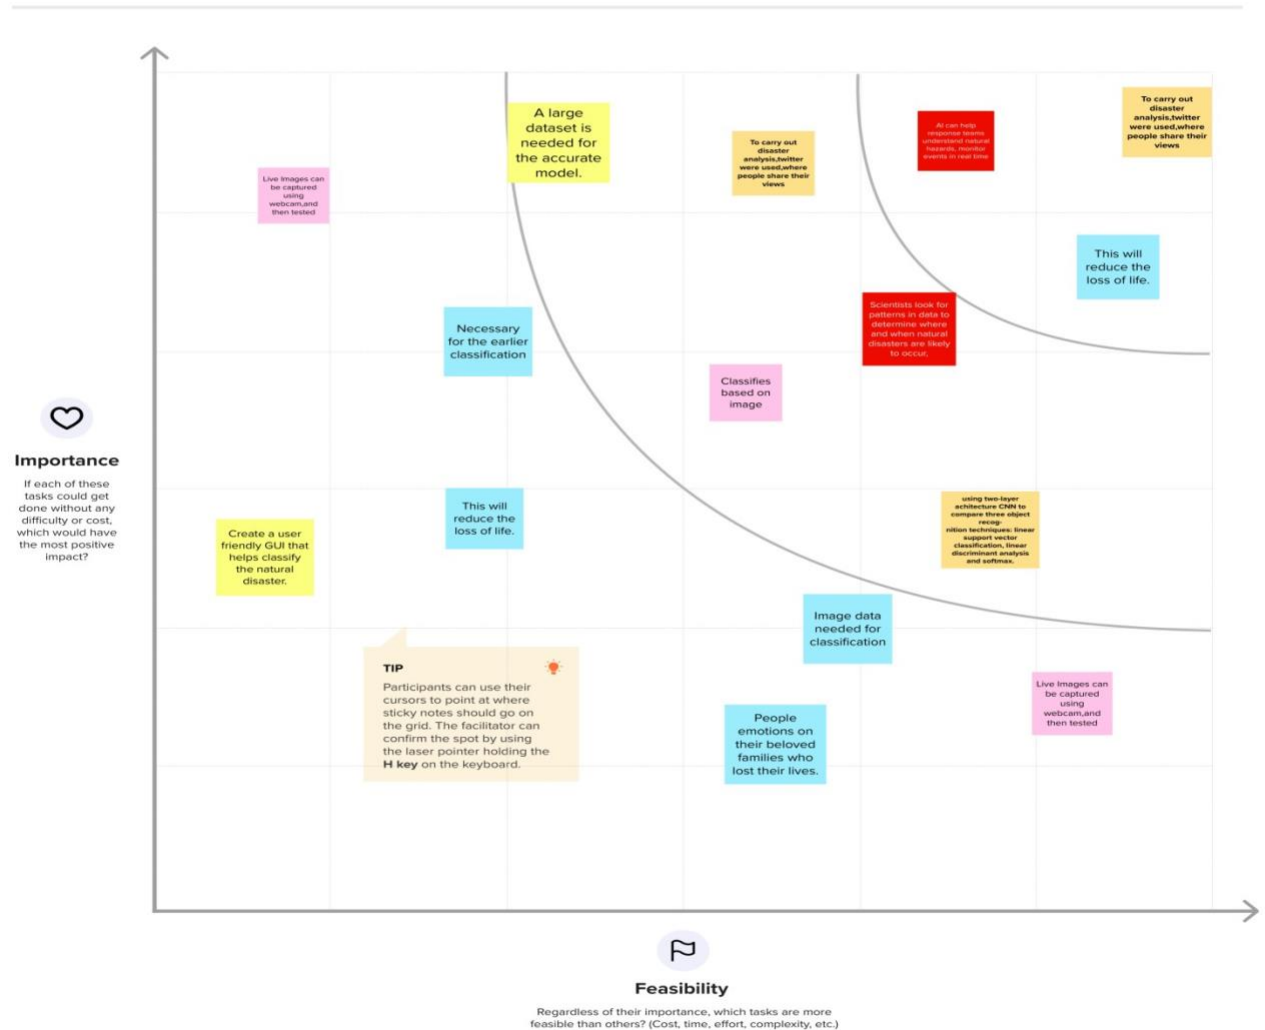

Step-3: Idea Prioritization

4

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

⌚ 20 minutes
